PARTH DHAWAN

Aspiring Financial Analyst

Panchkula, Haryana | +91 7082335959 | parthdhawan921@gmail.com | LinkedIn | GitHub | Portfolio

Profile Summary

Aspiring Financial Analyst with hands-on project experience in **Excel, Power BI, SQL and Python**, covering financial modeling, P&L and unit economics, break-even, scenario and sensitivity analysis, and trend analysis of public company disclosures and official economic data. Skilled at reconciling numbers before reporting and turning them into clear, data-driven recommendations for decision-makers.

Projects

Dark-Store Break-Even Model (Swiggy Instamart) | GitHub | Case Study | *Excel* **October 2026**

- Built a **financial model** in Excel from Swiggy Q1 FY27 disclosures (**114.5M orders, AOV Rs 691, 1,171 dark stores**).
- Rebuilt a per-order **P&L** and calibrated fixed cost to the disclosed -0.2% margin, with 9 automated checks that must pass.
- Found break-even at **~1,133 orders/store/day**; a 10% AOV lift is worth **~Rs 85 crore/quarter**.

UPI Payments Analysis (PhonePe Pulse) | GitHub | Case Study | *Python* | *Pandas* **October 2026**

- Sized India's UPI market from **PhonePe Pulse** data: **20.5B transactions worth Rs 35.6 lakh crore** (2018 to 2021).
- Found quarterly volume grew **29**× and that user adoption drives volume (**r = 0.80**) far more than population density (0.31).
- Reconciled district totals with state totals in Python (Pandas), catching a running-total double count before reporting.

Power BI Data Model Makeover | GitHub | Case Study | *Power BI* | *DAX* | *Power Query* **October 2026**

- Rebuilt a tangled **20-table Power BI model** into a clean **star schema** (13 tables) covering orders, invoices, payments and inventory.
- Cleaned data in **Power Query** (merge, unpivot, split), removed test records and merged 5 customer tables into one dimension.
- Added **DAX measures**, a junk dimension, a bridge table and a security table, so finance reports count every order once.

India CPI Inflation Analysis (2013 to 2023) | GitHub | Case Study | *Excel* **October 2026**

- Analyzed official **MoSPI CPI data** (23 categories, rural and urban, 2013 to 2023) in Excel with pivot tables, CORREL and charts.
- Found inflation **peaked at 6.62% in 2022**, eased to 3.18% in 2023, and that transport prices rose fastest after COVID.
- Showed crude oil barely moves CPI (**correlation 0.13 at most**) and flagged missing months in the source data before reporting.

Technical Skills

Financial Analysis: Financial Modeling, P&L Analysis, Unit Economics, Break-Even Analysis, Scenario & Sensitivity Analysis, Trend Analysis, Market Research

Excel & Reporting: Advanced Excel (Pivot Tables, XLOOKUP, Data Tables, What-If Analysis, CORREL, Charts), Power BI, DAX, Power Query, Dashboards, KPI Reporting

Database Management & Querying: SQL, MySQL, Data Modeling, Star Schema, Data Cleaning, Data Validation & Reconciliation

Data Analysis & Programming: Python (Pandas, NumPy, Matplotlib), Exploratory Data Analysis, Statistical Analysis, Correlation Analysis

Soft Skills & Tools: Attention to Detail, Analytical Thinking, Stakeholder Communication, Presentations (PowerPoint), Data Storytelling, AI-Assisted Analysis (Claude Code)

Education

Chitkara University (CGPA: 7.21/10) **2021 - 2025**

Bachelor of Pharmacy *Himachal Pradesh*

Trainings and Certificates

Coding Ninjas

Advanced Certification in Data Analytics with Generative AI

- Introduction to Analytics & Excel | Data Visualization with Power BI | SQL for Data Analysis

LinkedIn Learning

- Claude Code for Data Analysis: Build Repeatable, Reliable Workflows | Databricks for Data Analysts

Anthropic Academy

- Claude 101
